Gathering input

When the user first creates the account, the app will have to get users to customize their profile by inputting data about themselves. If they have a profile already, the information they entered when they first signed up will be saved.

The next time the user logs in, they will be directed straight to the home screen and the information from signing up will be saved in their profile where they can edit it at anytime.

keyboard element: appears once the user selects one of the sign up options to input their information.

Onboarding

Registration

The user has to register information about themselves, so that the app understands their concerns and can help improve their individual needs.

Android has a progress bar to illustrate how close the user is to completing the registration step.

Onboarding

Informative tutorial

A quick video to inform the different types of skin types there is based on the test they just performed. Allowing the user to select their skin type and continue creating their profile.

Input

Input prompt to register all the products the user is currently using on their face.

Navigation

Notification that all the steps for registering are complete.

Completeness meter

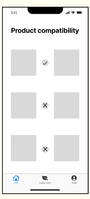
Android: the line is complete with a different color.

iOS a pop up check mark to indicate the registration is complete.

Content

Cards

Based on the current products that the user has, this section will show the image of each one and highlight whether to avoid using them together and which ones compliment to increase the benefits they'll receive from those products.



Top Navigation bar

-Android: the hamburger bar is more ubiquitous with Android devices compared to ios apps. Containing hidden features that are secondary.

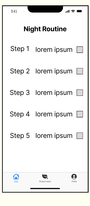
-Android: the profile is placed last at the top far right.

Bottom Navigation bar

-ios: the most used features placed at the bottom with the profile on the far right.

Miscellaneous

Daily log

the user can input by clicking the box whether they used that product in their routine.


It also informs the user in what order to use each product.
